

AquaSParkle

Multifunctional Chlorine Tablets 20g

Key Features

- Convenient slow release 20g tablets
- Ideal for floating dispensers or chlorine feeders
- High chlorine content – economical
- Contains clarifier for crystal clear hot tub water

Use AquaSPARKle Multifunctional Chlorine Tablets 20g to keep your hot tub water safe, sparkling and bacteria free. The tablets are slow dissolving for consistent, long-lasting chlorine release.

Target: Free chlorine range: 3 – 5mg/l (ppm)

Application Instructions

- 1) Maintain the pH level within the ideal 7.2 – 7.6 range. Adjust if required.
- 2) Maintain the free chlorine level within the ideal 3 – 5mg/l (ppm) range.
- 3) Always dose these tablets via a floating or chlorine dispenser. **Warning:** Do not add tablets directly into your hot tub.
- 4) As these tablets are slow release, it may be necessary to apply rapid dissolving chlorine granules initially to boost the chlorine level.

Floating Dispenser: As a guide, add 1 – 2 tablets to the dispenser per 1000 litres of hot tub water. Adjust the flow mechanism at the base of the dispenser to maintain the recommended chlorine level and/or adjust tablet numbers.

Chlorine Feeder: Add tablets to the chlorine dispenser following the manufacturer's instructions. Adjust the flow to maintain the recommended free chlorine level.

Recommended: Use AquaSPARKle Spa Fusion to oxidise your hot tub water weekly, or after heavy use.

Note: Brand new, freshly filled hot tubs or tubs left drained for a period of time, require a much higher free chlorine level of 50mg/l (ppm), circulated for a minimum of 1 hour.
