

AquaSParkle

Stabilised Chlorine Granules

Key Features

- A traditional, easy-to-dose chlorine granule
- Little effect on pH
- Rapid dissolving

Use AquaSParkle Stabilised Chlorine Granules to keep your hot tub water safe and bacteria free. The granules are rapid dissolving and have minimal impact on the pH.

Target: Free chlorine range: 3 – 5mg/l (ppm)

Application Instructions

- 1) Maintain the pH level within the ideal 7.2 – 7.6 range. Adjust if required.
- 2) Maintain the free chlorine level within the ideal 3 – 5mg/l (ppm) range.
- 3) Apply the granules directly to your hot tub water with the pump(s) running to aid distribution. Alternatively, if the hot tub water is cold (below 20°C), pre-dissolve in warm water using a suitable plastic container.
- 4) If applying a larger booster dose, always allow sanitiser levels to fall to 5mg/l (ppm) or less before hot tub use resumes.

Daily Dose Rate				
Water volumes		To raise free chlorine level by:		
Litres	Gallons	1mg/l	3mg/l	5mg/l
1,000	220	2g	6g	9g
1,500	330	3g	9g	14g

Recommended: Use AquaSParkle Spa Fusion to oxidise your hot tub water weekly, or after heavy use.

Note: Brand new, freshly filled hot tubs or tubs left drained for a period of time, require a much higher free chlorine level of 50mg/l (ppm), circulated for a minimum of 1 hour.
